

How to disassemble the solar shower bracket

How do you remove a shower head holder?

Depending on the type of bracket, pull the cover way or unscrew it with a screwdriver. Once the screws are exposed, unscrew them to release the bracket. With the bracket now removed, you should be able to slide the old shower head holder off of the rail.

How do you remove a shower head hose?

You may need to use a screwdriver and a bit of force to pull yours off. Unscrew the holding bracket - making sure not to lose the screws down your plughole - and then proceed to slide off the shower head holding bracket. To do this, you need to remove the shower head and hose itself first.

How do you reattach a shower head holder?

With the new shower head holder in place it's time to reassemble the shower rail. Reattach the shower rail by securing it to the wall with the screws. Make sure the screws are tight and the bracket is secure. Your shower rail should now be secure and ready for use!

How do you remove a bracket?

Most have covers which you simply prise away exposing the fixing screws underneath. However, some covers have small holes on the underside of the bracket so you can remove it with a screwdriver. Depending on the type of bracket, pull the cover way or unscrew it with a screwdriver. Once the screws are exposed, unscrew them to release the bracket.

Do you need a shower head holder replacement?

When it comes to shower maintenance, one of the more common jobs you are likely to have to carry out is the replacement of your shower head holder. This is especially the case if you have a plastic bracket, as the material can harden and therefore become brittle over the years, making it prone to cracking and splitting.

How do you remove a wall fixture?

Use a flathead screwdriver to depress the tab against the wall and slide the fixture up to unlock and remove. There will be an opening with no tab and no screw located on the base of the post (s).
