

How to distinguish good from bad photovoltaic panels with hidden cracks

What causes micro cracks in solar panels?

Even slight imperfections in the PV cell can lead to large micro-cracks once it is incorporated into the PV module. The length of micro-cracks can vary; some span the whole cell, whereas others appear in only small sections of a cell. Micro Cracks in Solar Panel How do micro-cracks occur?

How to prevent solar panel micro-cracks?

Three key areas must be addressed to effectively prevent solar panel micro-cracks: manufacturing, transportation/installation, and environment. Selecting a solar panel manufacturer that acknowledges the prevention of micro-cracks is a critical part of the solution.

Why are solar PV cells prone to micro-cracks?

The silicon used in solar PV cells is very thin (in the range of 180 +/- 20 microns) and hence is susceptible to damage easily if the PV module's production and handling are not up to the required standards. Even slight imperfections in the PV cell can lead to large micro-cracks once it is incorporated into the PV module.

How do I know if a solar panel is bad?

One failing cell can only be easily isolated to a given string, which could be 20 or more modules or panels long. Determining which module contains a bad cell in a typical layout requires disconnecting and testing each panel individually. Another option is to fly a thermal infrared camera over the solar array.

How do you know if a PV system is bad?

Besides, this method can provide an overview of the PV system's condition. Some visible defects in PV modules are bubbles, delamination, yellowing, browning, bending, breakage, burning, oxidization, scratches; broken or cracked cells, corrosion, discoloring, anti-reflection and misaligning (see Fig. 1).

Can a camera detect a defect in a solar panel?

Results showed that the technique can detect minor defects and could therefore help technicians do preventive maintenance of solar panels in the field. Mark Donaghy, vice president of sales and marketing at Raptor Photonics, said the company also offers a higher-resolution camera.
