

How to generate the most electricity from solar energy

How is solar power generated?

Solar power is generated in two main ways: Solar photovoltaic(PV) uses electronic devices,also called solar cells,to convert sunlight directly into electricity. It is one of the fastest-growing renewable energy technologies and is playing an increasingly important role in the global energy transformation.

How can we use sunlight to generate electricity?

And there is another way to use this abundant energy source: photovoltaic (photo = light,voltaic = electricity formed through chemical reaction) solar cells,which allow us to convert sunlight directly into electricity.

How does solar power work?

Energy developers and utilities use solar photovoltaic and concentrating solar power technologies to produce electricity on a massive scale to power cities and small towns. Learn more about the following solar technologies: Converts sunlight directly into electricity to power homes and businesses.

How do solar cells produce electricity?

Solar radiation may be converted directly into solar power (electricity) by solar cells,or photovoltaic cells. In such cells,a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors. (See photovoltaic effect.)

How many megawatts does a solar power station produce?

The Solar Star PV power station produces 579 megawattsof electricity,while the Topaz Solar Farm and Desert Sunlight Solar Farm each produce 550 megawatts. Learn more about photovoltaics research in the Solar Energy Technologies Office,check out these solar energy information resources,and find out more about how solar works.

What is solar energy used for?

This energy can be used to generate electricityor be stored in batteries or thermal storage. Below,you can find resources and information on the basics of solar radiation,photovoltaic and concentrating solar-thermal power technologies,electrical grid systems integration,and the non-hardware aspects (soft costs) of solar energy.
