

What does ICL do?

ICL is a global innovator in the field of energy. We stay committed to making an impact through sustainable solutions for energy storage, renewable energy, oil and gas drilling, oil and fuel, and power plants. Any questions? Contact us for more information about our variety of products.

Is ICL a sustainable company?

ICL's energy consumption is becoming more sustainable: in 2022, more than 8% of ICL's energy mix came from renewable sources, doubling last year's consumption. ICL's sustainability vision is supported by the Company's Board of Directors and management, with a target to increase renewable energy consumption to 50% by 2040.

What is ICL's energy consumption?

ICL's energy consumption is both direct and indirect. Direct energy is energy produced by fuel combustion, mainly used to operate steam boilers, electricity generators and similar installations at ICL production sites, as well as fuel for vehicles. Indirect energy use is mainly via our purchase of electricity and steam from external suppliers.

What products does ICL offer?

Contact us for more information about our variety of products. ICL, a leader in the field of energy storage, uses advanced materials including bromine, phosphates, and high purity phosphoric acid for the production of high-capacity, energy-efficient hybrid-flow batteries for electric vehicles, grid and off-grid, and renewable energy storage.

What is ICL energy storage?

ICL offers a range of energy storage solutions, including tailor-made electrolyte blends for Bromine-based flow batteries. ICL has developed unique chemical blends required to create flow batteries that are ideally suited for storing large amounts of energy. These batteries contribute to efforts that aim to solve energy storage challenges.

How much energy does Burundi use?

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries.

Burundi: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

ICL's energy consumption is both direct and indirect. Direct energy is energy produced by fuel combustion, mainly used to operate steam boilers, electricity generators and similar installations at ICL production sites, as well as fuel for ...

ICL's Energy Storage Solutions are helping improve electrical storage capacity. New bromine battery technology is transforming the potential of renewable energy. The ICL group grew out of early pioneering ventures in the mineral ...

In October of 2022, both ICL and OF& EM were awarded funding from the U.S. Department of Energy to expand domestic manufacturing of batteries for energy storage and electric vehicles (EVs), in order to ease reliance on materials and components imported from other countries.

ICL's energy consumption is both direct and indirect. Direct energy is energy produced by fuel combustion, mainly used to operate steam boilers, electricity generators and similar installations at ICL production sites, as well as fuel for vehicles.

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. [1] The country produces locally 69% of the electricity it consumes, with the rest imported from other countries. [1]

ICL is committed to being part of the energy storage value chain and its expertise in advanced chemistry plays a major role in these solutions. ICL's products and services include phosphate-based and bromine-based specialty products.

Burundi: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

ICL strives to continuously improve its energy efficiency and decrease its emissions. It is doing so by transitioning to renewable energy, utilizing highly efficient electricity production units (natural gas based cogeneration) and implementing multi-year energy efficiency programs.
