

How is electricity produced in French Polynesia?

Electricity production in French Polynesia is still heavily dependent on fossil fuels despite the development of renewable energy sources (REn). Electricity production and consumption are unevenly distributed over the territory as they are correlated with the geo- graphical distribution of the population.

Does French Polynesia rely on hydrocarbons?

French Polynesia, like most island territories, is highly dependent on hydrocarbon imports. In 2019, 93.8% of energy consumed in the archipelagos came from imports of various petroleum-based fuels. The renewable energy penetration rate in power generation stood at 28.78% in 2019. This figure has remained stable over the last five years.

What is French Polynesia's energy transition plan?

French Polynesia's energy transition plan has three main objectives: Change the energy model, by gradually replacing the use of fossil fuels with renewable energies in all activities

What is PEC in French Polynesia?

In French Polynesia, mainly crude oil and its derivatives, hydraulic power and solar radiation PEC is expressed in tonnes of oil equivalent (toe), unit that allows the different energies to be compared in relation to their intrinsic characteristics. litres of hydrocarbons were imported in 2019 in French Polynesia. is the dependency rate.

AFD and the Polynesian authorities have jointly defined a support program to assist French Polynesia with its energy transition. By 2030, the renewable energy penetration rate in power generation will reach about 75%.

Primary Energy Consumption (PEC) represents all unprocessed, directly exploited or imported energy products. In French Polynesia, mainly crude oil and its derivatives, hydraulic power and solar radiation PEC is expressed in tonnes of oil equivalent (toe), unit that allows the different energies to be compared in relation to their intrinsic ...

SERVODAY's Boiler Fuel Storage & Feeding System is designed for efficient energy conversion from biomass fuels in French Polynesia, ensuring consistent and controllable feeding for optimal boiler operation.

The inauguration of the new Be Energy center in Tahiti marks a pivotal moment for French Polynesia in its ecological transition. By addressing the complex issues surrounding battery management, this centre offers a localized and sustainable solution, which is essential for an island territory grappling with unique environmental and economic ...

This established and key partnership gives to EDT access to a full range of energy and industrial services to support the sustainable development of island territories such as French...

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Akuo has teams present in New Caledonia, French Polynesia, Kingdom of Tonga, New Zealand and Australia, which provide in-house support along the whole value chain of renewable energy projects.

Petr o pol supports companies of the building sector and participates to the French Polynesia islands development. We also actively participate to the development of Tahiti and the Polynesian archipelagoes in the building and public works sectors for our communities" well-being.
