

What is the Niger solar energy access project?

The World Bank-funded Niger Solar Electricity Access Project enables farmers to buy pumps. Based on its success, a broader \$800-million solar energy project - Niger Accelerating Electricity Access (HASKÉ) - will integrate grid power, mini-grids, and off-grid solutions for electricity and clean cooking.

Who financed a solar power plant in Niger?

The European Union, the French Development Bank and the government of Niger co-financed the installation. A French consortium made up of Akuo and Sagecom has finished building a 30 MW solar power plant in Gorou Banda, Niger. The Niger government had initially planned the project to have a capacity of 50 MW.

Why is solar energy important in Niger?

Increasing access to electricity through solar energy in Niger, especially in rural areas, is key to economic transformation and empowerment. Making use of the support and credit provided by our project, farmers really increase yields, rotate, and even diversify their crops, which is so important for food security.

Is solar energy a key to economic transformation in Niger?

"Increasing access to electricity through solar energy in Niger, especially in rural areas, is key to economic transformation and empowerment," says Kwawu Mensan Gaba, Practice Manager at the World Bank.

What is Niger accelerating electricity access (Haské)?

Based on its success, a broader \$800-million solar energy project - Niger Accelerating Electricity Access (HASKÉ) - will integrate grid power, mini-grids, and off-grid solutions for electricity and clean cooking. Boubacar Issoufou Alzouma manages a large farm in Finaré, Niger.

How many solar pumps are there in Niger?

Four solar pump companies accounting for half of all pump sales in Niger have tapped into the credit line, bringing 800 solar pumps to Niger's farms since 2017. NESAP has loaned more than \$1.5 million to solar system importers, wholesalers, retailers, installers, and solar electricity service providers.

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

With 80% of Niger's population living in rural areas, the rate of electrification goes down to less than 1%. IFC is working with the government to identify private operators to design, finance, build, operate, and maintain grid-connected solar PV installations on an IPP basis, with the total combined minimum dispatch capacity of at least 50 ...
