

Installing photovoltaic panels made a lot of money

How much does it cost to install solar panels?

For most homeowners, the decision to install solar panels is primarily driven by cost. The average cost of solar panels as of Spring 2024 was \$3.40 per watt, excluding financing. This price includes both hard costs, like hardware and equipment, and soft costs, like installation labor costs, solar loan costs and fees, and required permitting.

Should I install solar panels on my home?

If you're deciding whether to install solar panels on your home, return on investment (ROI) is an important concept to be aware of. Simply put, your ROI is the amount of money you can expect to save over the lifetime of your solar panels compared with the initial cost of purchasing and installing the equipment.

Do solar panels add value if you move?

However, adding a solar system can still benefit you financially if you move. According to a few studies, solar panels increase your home's value by about 4%. Just be wary of leasing solar panels if you think you might move. Leases are typically long-term and can be difficult to cancel, making it more challenging to sell your home.

How do you price solar panels?

In our expert opinion, the most effective and accurate method for pricing solar panels is the gross cost. Let's explain why and then discuss each pricing model in detail. A lot of work goes into ensuring that you can safely turn on your solar power system—the process is much more involved than simply attaching solar panels to your roof.
