

What is Iran's energy supply?

In 2020, the Total Energy Supply (TES) in Iran was primarily sourced from oil and gas, with gas being the predominant contributor at 69% and oil at 29%. Nuclear power and renewable sources each accounted for 1% of the nation's TES.

How much energy does Iran use per day?

In 2017, the fuel consumption in Iran was equivalent to 5.5 million barrels of fuel per day (bpd), the rate of which is considered as the highest energy consumption rate in the world in terms of energy intensity. Energy plays an important role in Iranian politics.

Can Iran tap solar energy?

Iran is also experimenting with electricity generation from organic wastes and plans to build power plants using sewage and organic waste of domestic and industrial origin as fuel. With about 300 clear sunny days a year and an average of 2,200 kilowatt-hour solar radiation per square meter, Iran has significant potential to tap solar energy.

What role does energy play in Iranian politics?

Energy plays an important role in Iranian politics. Robert Baer in his 2008 book *The Devil We Know: Dealing with the New Iranian Superpower* argued that Iran had attained the status of an energy superpower and was on its way to become a military-political superpower.

Why is oil a problem in Iran?

Oil in Iran is a major cause of air pollution and greenhouse gas emissions. Iran is in a constant battle to use its energy resources more effectively in the face of subsidization and the need for technological advances in energy exploration and production. In 2008, energy wastage in Iran amounted to six or seven billion dollars.

How much solar power does Iran have?

Iran has an average of 2,200 kilowatt-hour solar radiation per square meter annually, and 90% of the country has enough sun to generate solar power 300 days a year. In 2020 there were just over 300 MW of wind power, less than 1% of installed capacity.

**Percentage of Income Payment Plans (PIPPs)** PIPPs. Eligible customers pay a predetermined percentage of income for utility service. Benefit levels are tailored to achieve an established affordability goal. Bills may be capped at a set percentage each month. May be paired with Arrearage Management Programs (IL, OH), or Energy Efficiency programs (VA)

Iran, endowed with abundant renewable and non-renewable energy resources, particularly non-renewable resources, faces challenges such as air pollution, climate change and energy security. As a leading exporter

and consumer of fossil fuels, it is also attempting to use renewable energy as part of its energy mix toward energy security and sustainability. Due to ...
