

Hybrid energy systems (HESs) consisting of both conventional and renewable energy sources can help to drastically reduce fossil fuel utilization and greenhouse gas emissions.

Solar energy and hybrid microgrids in Iraq can greatly reduce fossil fuel reliance. Iraq's daily power outages show the urgent need for reliable, sustainable energy. Delphi survey shows neighborhood diesel generators are an inefficient, costly fix.

It is obvious from Table 3 that the hybrid system composed of a 7 kW PV, 21 batteries, and a 5 kW converter with the national grid is the optimum option. The NPC and COE of this scenario are USD 33,747 and 0.142 USD/kWh, respectively.

It is obvious from Table 3 that the hybrid system composed of a 7 kW PV, 21 batteries, and a 5 kW converter with the national grid is the optimum option. The NPC and COE of this scenario are USD 33,747 and 0.142 ...

This article analyses a hybrid solar-wind electrical system for Duhok city northern part of Iraq to know the feasibility of this system compared to the local electrical network. Firstly, an access to solar and wind resources ...

In this research, a highly potential campus site for solar/wind energy production is identified with the purpose of micro-hybrid system installation in on-grid mode to sellback the excess...

A hybrid system as a renewable power generating resource for grid-connected applications in three Iraqi cities have been presented with meteorological data for the selected sites and the...

This article analyses a hybrid solar-wind electrical system for Duhok city northern part of Iraq to know the feasibility of this system compared to the local electrical network. Firstly, an access ...

In this article, a hybrid system was proposed as a renewable resource of power generation for grid connected applications in three cities in Iraq. The proposed system was simulated using MATLAB solver, in which the input parameters for the solver were the meteorological data for the selected locations and the sizes of PV and wind turbines.

This article analyses a hybrid solar-wind electrical system for Duhok city northern part of Iraq to know the feasibility of this system compared to the local electrical network. Firstly, an access to solar and wind resources have been ensured for Duhok.

In this research, a highly potential campus site for solar/wind energy production is identified with the purpose

of micro-hybrid system installation in on-grid mode to sellback the ...

In this article, a hybrid system was proposed as a renewable resource of power generation for grid connected applications in three cities in Iraq. The proposed system was simulated using ...

This paper addresses many of the advantages of the hybrid electric system when combining wind and solar (PV) technologies. The experimental work was done in Al-Muthana Governorate. This area was chosen because wind speed is high compared to the rest of Iraq, which enables the generation of electricity acceptable for use

This paper addresses many of the advantages of the hybrid electric system when combining wind and solar (PV) technologies. The experimental work was done in Al-Muthana Governorate. ...
