

What is scale microgrids?

Scale Microgrids designs, builds, finances, and operates cutting edge distributed energy assets that offer cheaper, cleaner, and more resilient power.

What is a microgrid and how does it work?

A microgrid is a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid and that connects and disconnects from such grid to enable it to operate in both grid-connected or 'island' mode.

Why should you invest in microgrids?

Our microgrids deliver results for your organization, with optimized on-site energy resources that provide cost savings, lower emissions, and enhanced resilience. We accelerate the growth of distributed energy by providing a wide range of financing offerings and deep, industry-specific expertise to customers and partners.

What are advanced microgrid controls?

Advanced microgrid controls automatically optimize the operation of each resource to provide benefits like everyday electricity cost savings, supplementary power capacity, lower emissions, and resilience during utility outages.

What is the current market mechanism in Ireland?

Flexibility on offer The current market mechanism in Ireland allows operators to sell services like inertia, short circuit power and reactive power as provided by the synchronous condenser technology to the transmission system operator.

On the 14th of November, major energy company Centrica revealed their plans for a 100 MW battery energy storage system to be built in Ireland. With a prospective delivery of 2022, if the ...

On the 14th of November, major energy company Centrica revealed their plans for a 100 MW battery energy storage system to be built in Ireland. With a prospective delivery of 2022, if the project goes ahead, it will be twice as large as their project currently being built (49 MW in Roosecote, Cumbria, UK with an expected completion date of 2018 ...

The utilisation of renewable energy resources for power generation is extremely important for Ireland due to the lack of indigenous fossil fuel resources. A micro-wind turbine is ...

Ireland could host Europe's first large-scale, iron-air project southwest of Buncrana town in Donegal County. The 10 MW facility proposed by FuturEnergy Ireland will be capable of storing 1...

Ireland based initiative, Innovation Green, has set out to develop a 100% renewable microgrid to power a trade and distribution campus in the center of the island. Located in the Midlands Region, a central area of Ireland, Innovation Green is a co-operation between Midlands Airport Developments, InSite Bavaria, the Technical University of ...

Our first large-scale installation in Aghada, Cork, went live in 2022, followed by a 75MW facility at Dublin's Poolbeg Energy Hub, Dublin in February 2024. Now, a second phase of BESS launched at Aghada in November has added a further 150MW of fast-response storage to Ireland's electricity network.

A microgrid is a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid and that connects and disconnects from such grid to enable ...

Scale designs, builds, operates, and finances on-site energy systems, which are tailored to meet the specific needs of organizations ranging from grocery stores to bus fleets to steel factories. With industry-leading expertise and a streamlined development process, Scale delivers optimal energy solutions for commercial and industrial facilities.

Siemens Energy will deliver the first-ever hybrid grid stabilization and large-scale battery storage plant at Shannonbridge in Ireland. This is the first time, these two technologies have been combined into one, single grid connection to stabilize the grid and make better use of renewable energy.

The Clean Export Guarantee (CEG) tariff provides an opportunity for micro-and small-scale generators in Ireland to receive payment from their electricity supplier for all excess renewable electricity they export to the grid. This remuneration is intended to reflect the wholesale market value of the electricity.

Our first large-scale installation in Aghada, Cork, went live in 2022, followed by a 75MW facility at Dublin's Poolbeg Energy Hub, Dublin in February 2024. Now, a second phase ...

The utilisation of renewable energy resources for power generation is extremely important for Ireland due to the lack of indigenous fossil fuel resources. A micro-wind turbine is by far the most commonly used grid-connected micro-renewable electricity generation system for domestic applications in Ireland, followed by solar PV.
