

Most of the solar power plants uses flat plate solar collectors which gains more generation in most of the countries. But parabolic trough are the most efficient and prominent collectors among all

The intensity of the incident radiation and external load of the cell determines I-V characteristics of a solar cell. The voltage and current generation from the solar cell can be easily calculated ...

Solar energy comes from the limitless power source that is the sun. It is a clean, inexpensive, renewable resource that can be harnessed virtually everywhere. Any point where sunlight hits the Earth's surface has the potential ...

Iron pyrite (iron(ii) disulfide, FeS_2) is a widely and naturally occurring sulfide of iron. Pyrite is found in quartz seams, in sedimentary and metamorphic rocks, and often beside coal deposits. Many of its industrial and scientific uses stem from ...

The study shares specific view with Ibhaze et al. [40] who argued that the amount of energy generated directly depends on the applied pressure while the voltage and current maximisation follows ...
