

Is installing solar panels illegal in any state?

Technically, no state outlaws or bans solar panels; quite the opposite. Most states have solar access laws that forbid any agreement, covenant, condition, bylaw, or contract that outlaws or limits solar installations by Homeowners Associations (HOA) or other municipal bodies.

Are solar access laws illegal?

With that being said, unpermitted systems are illegal to operate in many American jurisdictions, even in states with solar access laws. What is the difference between solar access laws and solar easement laws?

Are photovoltaic solar energy systems safe?

The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing solar deployment.

Is the distributed solar photovoltaic market safe?

In the rapidly evolving solar industry, state and local governments and industry groups are implementing a variety of approaches to ensure that consumers who choose to interact with the distributed solar photovoltaic (DPV) market remain safe and are treated fairly.

Are solar panels a viable option?

However, some states still make installing solar panels functionally impossible by creating laws with "reasonable restrictions," such as increased taxing, energy caps, or even billing solar panel users. Combine these laws with a lack of incentive programs, and solar panels are not viable for homeowners in many states.

Can a solar lease be used as a PPA?

In certain markets where PPAs are not permitted by law, solar leases may be the only third-party option available. In other states, however, neither solar leases nor PPAs are permitted. State clean energy funds are another way to support renewable energy, energy efficiency, or low-income energy programs.
