An agro-photovoltaic facility is an electricity production facility using solar technology, which integrates agricultural activity throughout the lifespan of the facility. The success of the combination is conditional upon establishing conditions that will allow the agricultural crops to exist and maintain the quantity and quality of the yield.

Founded in 2021, Trigo Solar is developing agri-voltaic solutions for rainfed crops, such as wheat, maize, soy beans and peanuts. Trigo Solar shareholders include Meshek Energy LTD, one of Israel's leading solar develop- and Elmor Renewable Energy LTD- ...

Agri-voltaics eases land-use competition between energy and agricultural production. The potential of agri-voltaics is enormous since it has been demonstrated that the global energy demand could be offset by solar production if <1% of agricultural land is ...

APV in Israel. Israel's current installed solar generation capability is ~2.9 GW, representing approximately 7% of the country's total electricity consumption. The Israeli government forecasts that the country's electricity demand will reach ~12 GW in 2030.

Doral brought to Israel the vision of solar agriculture through an innovative development in which advanced agriculture and solar energy coexist. Combining these two systems maximizes electricity output and significantly enhances agricultural production.

The agro-voltaic installation, which stands four meters high and has a power of 3.5 megawatts, was adapted above the vineyard, using a microclimatic control system to overcome the threats of the...
