

At the same time, we actively participate in a number of major S& T projects and cooperate with the international well-known brand to develop new energy products. Thus, we obtained a series of important scientific research achievements.

Since its founding, the company has adhered to market-oriented, providing high-quality products as the goal, and pursued the best raw materials, advanced power electronics technology, excellent manufacturing processes and exquisite assembly structure in LiFePO₄ battery field.

Jingnoo New Energy was established in 2012 and is located in Longhua District, Shenzhen, China. We have more than 50 staffs including 10 personnel in research and development department, our annual production for balanced car battery module is more than 2 million sets.

It meets the application needs of on-site peak shaving, off-grid backup power supply, self-generation and self-use. Our company can provide 100KW/200kWh-1MW/2MWh container energy storage R& D and production.
