

What is a solenco Powerbox?

The Solenco Powerbox is a so-called 'CHP (micro combined heat and power device) that supplies both electricity and heat. In most situations, the Powerbox alone will not provide sufficient heat output to heat up a building completely. That is why a connection with a heating system, eg a heat pump, is recommended.

Will the solenco Powerbox be a disruptive technology?

"I, doctor Nicolas Brahy, representing Hydrogen Europe, will support the developing of the Solenco Powerbox, since it can be seen as a disruptive technology for bringing more renewable energy in the European Energy mix and paving the way for introducing hydrogen technology in our daily live."

Who is solenco Power NV?

Solenco Power NV is a fast-growing SME innovator in the field of cleantech and specializes in energy storage systems for residential and industrial sectors. The Solenco Powerbox (SPB) is the company's first disruptive commercial energy storage product, which is approaching commercial readiness. Dr.

Solenco Power is ready to take it to the mass market and make the product the kick starter of a global renewable energy business "made in Europe". The revolutionary Solenco Powerbox TM is your insurance against rising energy prices and the cornerstone of ...

The Solenco POWERBOX is a system that is designed to convert electrical renewable energy (solar / wind) or energy from play-the-grid mode, into (green) hydrogen that can later be converted again into electricity and ...

Peaks in electricity prices - Price Imbalance. At night or when there is a lack of electricity, the stored hydrogen can be transformed by the reversible PEM fuel cell principle into electricity and heat.

The POWERHUB is an all-in-one renewable energy storage system for electricity and heat generation. It's the community-scale version of the Solenco Powerbox (SPB) using electrolysis and fuel cell principles. It integrates multiple modules ...

The Solenco Powerbox (SPB) functions as part of an integrated solution, in a chain of renewable energies: production, storage and consumption. When there's no sunshine, electricity and heat ...

Solenco Powerbox(TM) has all the components required for integrated control of electricity and heat. Its only module (stack) contains both the electrolyzer and the fuel cell to make it more compact and cost-effective. Powerbox is also ...

The POWERHUB is an all-in-one renewable energy storage system for electricity and heat generation. It's the community-scale version of the Solenco Powerbox (SPB) using electrolysis and fuel cell principles. It

integrates multiple modules allowing the scalability of electrical and thermal production capacity.

The product enables EU households to be 100% independent from the grid and 100% independent from price fluctuations in fossil fuels. It is the missing link for mass uptake of residential solar PV and an insurance against rising energy prices.

The SOLENCO POWER BOX TM (SPB) eliminates the uncertainty in supply and cost of energy for family homes and commercial buildings by using small-scale energy storage based on hydrogen technology, in combination with renewable energy sources (wind and solar PV).

Peaks in electricity prices - Price Imbalance. At night or when there is a lack of electricity, the stored hydrogen can be transformed by the reversible PEM fuel cell principle into electricity ...

Solenco POWERBOX - Reversible Fuel Cell System by Solenco Power NV. The Solenco POWERBOX is a system that is designed to convert electrical renewable energy (solar / wind) or energy from play-the-grid mode, into (green) hydrogen that can later be con...

Solenco Powerbox(TM) has all the components required for integrated control of electricity and heat. Its only module (stack) contains both the electrolyzer and the fuel cell to make it more compact and cost-effective. Powerbox is also provided with a water purifier and a control system with remote access option.

The Solenco Powerbox (SPB) functions as part of an integrated solution, in a chain of renewable energies: production, storage and consumption. When there's no sunshine, electricity and heat are produced by the Solenco Powerbox from the stored hydrogen. Renewables can function as the sole source of energy. Electricity needs are covered by the ...
