IRENA's newly released "Renewable Energy Outlook: Lebanon" suggests scaling up renewables could result in annual savings of USD249 million. Lebanon has the potential to generate up to 30 per cent of its electricity from renewable sources by 2030, according to a new report published by the International Renewable Energy Agency (IRENA).

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included.

By prioritizing renewable energy development, energy efficiency, and improving regulatory frameworks, Lebanon has created a more resilient and sustainable energy system. Lebanon's energy sector faces significant challenges but presents opportunities for change. The focus must be on addressing critical uncertainties, fostering

Lebanon has adopted an ambitious target to cover 30% of its energy consumption from renewables by 2030. This study, carried out by the International Renewable Energy Agency (IRENA) in collaboration with Lebanon's Ministry of Energy and Water (MEW) and the Lebanese Centre for Energy Conservation (LCEC), examines the policy, regulatory ...

Lebanon is set to benefit from a new solar power plant, which will be constructed in Kfifan, Batroun, and help provide electricity in Lebanon. However, eleven companies have been awarded contracts to rent lands to construct facilities in multiple governorates.

Facing a severe energy crunch, Lebanese are increasingly turning to the sun to meet their electricity needs. But high costs remain a barrier to widespread adoption of solar power systems.
