

What type of energy is used in Libya?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Libya: How much of the country's energy comes from nuclear power?

What is Libya's energy supply based on?

Furthermore, in 2020, the combined revenues from oil and natural gas exports constituted approximately 73% of Libya's total export value. In 2020, the total energy supply (TES) primarily came from oil and gas, which contributed 53% and 43%, respectively, while renewables accounted for approximately 4%.

How did energy consumption change in Libya?

Domestic energy consumption in Libya was likely driven by industry and population growth. During this period, according to the International Energy Agency, the world population grew 5.3%, and the Libyan population grew 9.4%.

Why is Libyan natural gas important for European energy security?

Libyan natural gas is crucial for European energy security, particularly for Italy, which sourced 4% of its natural gas imports from Libya in 2023 via the Greenstream pipeline. This pipeline plays a key role in connecting Libyan gas fields directly to Sicily.

How will the European Union support Libya's energy transition and climate resilience?

With a firm commitment to supporting Libya's energy transition and climate resilience efforts, the European Union has allocated funding to GIZ and UNDP to implement transformative projects to enhance Libya's capacity in renewable energy and energy efficiency and mitigate and adapt to climate change.

What is bioenergy in Libya?

Bioenergy comprised 100% of the renewable energy supply. Oil is the major natural resource of Libya, with estimated reserves of 43.6 billion barrels. Libya is a member of OPEC.
