

# Lithium battery energy storage new technology and patents

Are lithium-ion battery energy storage systems sustainable?

Presently, as the world advances rapidly towards achieving net-zero emissions, lithium-ion battery (LIB) energy storage systems (ESS) have emerged as a critical component in the transition away from fossil fuel-based energy generation, offering immense potential in achieving a sustainable environment.

What are the goals of a lithium battery patent?

According to the United States national blueprint for lithium batteries, one of the main goals is stated as to maintain and advance United States battery technology leadership by strongly supporting scientific R&D, STEM education, and workforce development which is directly aligned with the claim with the patent [109,174,176].

How to improve the production technology of lithium ion batteries?

However, there are still key obstacles that must be overcome in order to further improve the production technology of LIBs, such as reducing production energy consumption and the cost of raw materials, improving energy density, and increasing the lifespan of batteries.

When did lithium-ion batteries become patentable?

Figure E-1 reveals that there was very little DOE-funded advanced batteries (i.e. lithium-ion related) patenting through 1995. This is not surprising, given that the commercialization of lithium-ion batteries did not start until the early to mid-1990s. Note: The data collection period for this analysis ended with 2018.

What are lithium-ion batteries?

Provided by the Springer Nature SharedIt content-sharing initiative Lithium-ion batteries (LIBs) have attracted significant attention due to their considerable capacity for delivering effective energy storage. As LIBs are t

Why are lithium-ion batteries important?

Lithium-ion batteries (LIBs) have become a crucial component in various applications, including portable electronics, electric vehicles, grid storage systems, and biomedical devices. As the demand for LIBs continues to grow, the development of production technology for these batteries is becoming increasingly important [1,2,3,4,5].

"Solid state also has a lot of patents and LFP (lithium iron phosphate) only just came off patent. ... LG Energy Solution is a battery and energy storage technology spin-off of ...

3 ???&#0183; A research team led by Prof Elumalai from the Department of Green Energy Technology, Pondicherry University, has secured three patents from the Controller of Patents, Government of India, for innovations in sustainable ...

In this area, we are developing technologies to aid the growth of the U.S. battery manufacturing industry, transition the automotive fleet to plug-in hybrid and electric vehicles and enable ...

3 ???&#0183; A research team led by Prof Elumalai from the Department of Green Energy Technology, Pondicherry University, has secured three patents from the Controller of Patents, ...

Amount of batteries and other energy storage needs to grow fiftyfold by 2040 to put world on track for climate and sustainable energy goals; Electric vehicles now main drivers of battery ...

Mumbai, March 14, 2022, Reliance New Energy Limited ("Reliance"), a wholly owned subsidiary of Reliance Industries Ltd, has today signed definitive agreements to acquire substantially all ...

1 Introduction. Lithium-ion batteries (LIBs) have been at the forefront of portable electronic devices and electric vehicles for decades, driving technological advancements that have ...

The importance of batteries has been growing as a solution in a very dynamic puzzle. As a set of technologies at the intersection of the clean-digital transition, their role is ...

In terms of innovation it will not be a surprise that Lithium-Ion battery technology has been the main focus. ... (LAES) or cryogenic energy storage, fewer patent applications are filed. The leading innovative companies ...

Fortunately, the innovation of nanomaterials (NMs) and their corresponding processing into devices and electrodes could enhance the functionality and/or advancement of the current ...

China has attached great importance to technology innovation of lithium battery and expects to enhance its efficiency in distributed energy storage systems. The driving ...

Sustainability: The battery itself can enable electrification to help meet carbon emission climate goals and is amenable to recycling. Battery materials and manufacturing processes are ...

Abstract: Lithium-ion battery is the most promising and efficient secondary battery, and is also the fastest development chemical energy storage power supply. It has become a hot competition ...

Sustainability: The battery itself can enable electrification to help meet carbon emission climate goals and is amenable to recycling. Battery materials and manufacturing processes are environmentally friendly.  
Scalability: Based on ...
