## Lithuania srcful energy gateway

The tokenomic of Srcful. Welcome to the Tokenomics section of the Srcful documentation! Here, we will explore the fundamental principles behind our token economy and how it supports our goal of creating a more sustainable energy system. Tokenomics is the study of how tokens are created, distributed, and utilized within a particular ecosystem.

With a Sourceful Energy Gateway, you can start validating green energy from your Distributed Energy Resource (DER) and earning tokens for contributing to the decentralized energy grid. Join the Beta.

Participants will be rewarded for their contributions towards the integration of Distributed Energy Resources (DERs) through the Srcful Energy Gateway. Upon achieving a critical mass of connected DERs, Srcful will offer diverse energy services, including: For DER Owners: Advanced visualization and analytics for monitoring energy resources.

This guide will help you get started with the Srcful Energy Gateway. Depending on your hardware, you can choose between two different approaches to get started. The first approach is for users who have a Rak Hotspot Miner V2 and want to dual-mine IoT and SRC.

Visit https://app.srcful.io to start pairing your Energy Gateway. Start by clicking the "Select Wallet" button to link your Solana Wallet. Connect your Solana Wallet, we recommend using Phantom. Start the pairing process by clicking "Onboard New Gateway" in the left sidebar.

Meet the Sourceful Energy Gateway - your solar panels" new best friend. This smart device quickly connects your solar plants or battery storage to our network through WiFi or Ethernet. Setup takes just minutes using our simple mobile app.

Lithuania srcful energy gateway

Internet of Things to revolutionize the energy industry. The possibilities of this innovative technology extend far beyond the current energy market, and the Srcful platform can be used in a variety of different ways. On this page, we'll explore three potential use cases for the Srcful ...

By getting a Srcful Energy Gateway, you can start validating green energy from your Distributed Energy Resource (DER) and earning tokens for contributing to the decentralized energy grid. To get started, visit our Hardware Vendor RAKwireless store and acquire an Energy Gateway.

The Srcful platform can serve as a powerful tool to complement these incentives and encourage even more individuals to invest in renewable energy sources. By using the Srcful Energy Gateway to measure and validate the energy generated by distributed energy resources (DERs), individuals can earn SRC tokens for their contributions to the ...

Connect the Energy Gateway to the internet using an Ethernet cable, and power it on by connecting the power cable. Wait approximately 10-15 minutes for the Energy Gateway to start up and fetch the latest firmware.

Discover the power of Srcful's Energy Gateway for efficient energy management. Earn SRC tokens while contributing to a decentralized energy network. Join the renewable energy revolution with Srcful today! We are currently upgrading our ...
