

What is Germany's energy supply based on?

Energy supply in Germany is based on a major sector which relies on both domestic production and foreign imports. Primary energy self-sufficiency in Germany was at 100 percent for three leading resources: brown coal or lignite, nuclear power, and renewable energy.

What is 100 percent energy supply in Germany?

The 100 percent level means that all of these resources can be supplied from within the country without reliance on imports. Discover all statistics and data on Energy supply in Germany now on [statista.com](https://www.statista.com)!

What is Germany's energy mix in 2021?

In 2021, Germany's energy mix was still dominated by fossil fuels. The energy carriers with the highest share in the energy mix were oil and oil products (excluding biofuels) (33% % of total energy consumption) and natural gas (26%), followed by solid fuels (mainly coal and lignite) (18%) and renewable energy and biofuels (17%).

What percentage of energy is generated in Germany?

The share of gas in power generation increased 1 percentage point to 16% last year. Wind and solar output increased by 3.4% and 8.4%, respectively. These rates are below the global average, reflecting the relatively mature status of the German market. Renewables made up 18% of primary energy and 41% of power generation.

What is Germany's energy self-sufficiency level?

Primary energy self-sufficiency in Germany was at 100 percent for three leading resources: brown coal or lignite, nuclear power, and renewable energy. The 100 percent level means that all of these resources can be supplied from within the country without reliance on imports.

How did Germany's energy mix affect Russia?

Germany's energy mix made it highly exposed to the ongoing energy crisis, leading to dramatic adjustments. Before Russia's war of aggression against Ukraine, Germany had a very high level of exposure to Russian gas and oil, at 65% and 34% respectively in 2021 (4).

Overview Energy plan Energy consumption Energy imports Sources of power Energy efficiency Government energy policy See also Energy in Germany is obtained primarily from fossil fuels, accounting for 77.6% of total energy consumption in 2023, followed by renewables at 19.6%, and 0.7% nuclear power. On 15 April 2023, the three remaining German nuclear reactors were taken offline, completing the country's nuclear phase-out plan. As of 2023, German primary energy consumption amounted to 10,791 Petajoule, making i...
