## SOLAR PRO. Magnetic levitation flywheel energy storage system production

Can magnetic forces stably levitate a flywheel rotor?

Moreover, the force modeling of the magnetic levitation system, including the axial thrust-force permanent magnet bearing (PMB) and the active magnetic bearing (AMB), is conducted, and results indicate that the magnetic forces could stably levitate flywheel (FW) rotor.

How can magnetic levitation improve the rotational speed and reduce maintenance loss?

To improve the rotational speed and reduce maintenance loss,magnetic levitation technology is utilized to actively regulate the displacements of the FW rotor in the FESS,considering the benefits of zero contact [23,24] and active controllability [25,26].

Can a small superconducting maglev flywheel energy storage device be used?

Boeing has developed a 5 kW h/3 kW small superconducting maglev flywheel energy storage test device. SMB is used to suspend the 600 kg rotor of the 5 kWh/250 kW FESS,but its stability is insufficient in the experiment, and damping needs to be increased .

What is flywheel energy storage fess technology?

The principle of flywheel energy storage FESS technology originates from aerospace technology. Its working principle is based on the use of electricity as the driving force to drive the flywheel to rotate at a high speed and store electrical energy in the form of mechanical energy.

What is a superconducting magnetic levitation bearing (SMB)?

Murakami et al. combines repulsive magnetic levitation system with a superconducting magnetic levitation system to construct a superconducting magnetic levitation bearing (SMB) that is stable along all axes, uncontrolled, and has strong axial suspension force. 3.3. Charge and discharge control strategy

Can a magnetic levitation system levitate a Fw rotor?

Moreover, the magnetic levitation system, including an axial thrust-force PMB, an axial AMB, and two radial AMB units, could levitate the FW rotor to avoid friction, so the maintenance loss and the vibration displacement of the FW rotor are both mitigated.
