

What is a microgrid report?

This report provides (1) an overview of the microgrid planning, assessment, and design process for DoD installations and (2) is a resource for energy managers, policymakers, contractors, and other stakeholders involved in microgrid projects.

What drives microgrid development?

The driving forces in microgrid development at the state and local levels include renewable energy requirements as reflected in renewable portfolio standards (RPS) in 29 states and Washington, DC; renewable portfolio goals in eight states; and increasing concerns regarding power system resilience due to growing extreme climate events [38,39,40].

What is microgrid design research?

Microgrid design research refers to technical innovations, design strategies, renewable-integration solutions, development pathways, and the sharing of these approaches. DOE projects that are contributing to improved remote microgrid designs include the following.

How does government support microgrids?

Support for microgrids comes from research and development (R&D) programs at federal and state levels, software and tools, grants and funding support to incentivize demonstration projects, and tax and financial incentives for the installation of distributed energy [2, 3, 6, 126].

What is microgrid planning & deployment?

Microgrid planning and deployment are programmatic focus areas executed between communities and national lab technical experts, under the recently established Energy Transitions Initiative Partnership Project (ETIPP).
