

How do you calculate power requirements for a microgrid?

The best way to estimate the future power requirements of the microgrid is to analyze or record data for the specific loads and introduce a contingency above the peak load.¹⁵ Other key considerations for understanding loads include power factor and system harmonics caused by nonlinear loads. See Appendix B for details on these considerations.

Can a microgrid supply enough power?

A microgrid must be able to supply enough generation to match electrical load requirements at all times. Evaluating existing on-site generation options (e.g., on-site PV, energy storage, cogeneration, and back-up generators) is the first step in developing a strategy for the microgrid to power loads.

How to develop a microgrid to power loads?

Evaluating existing on-site generation options (e.g., on-site PV, energy storage, cogeneration, and back-up generators) is the first step in developing a strategy for the microgrid to power loads. Using existing generation sources is generally preferred over building new generation assets, as it is usually more cost-effective and faster to develop.

Should a microgrid be integrated with a utility grid?

To do this seamlessly, the microgrid should be integrated with the utility's automation systems at the substation and distribution levels. By connecting a microgrid to the utility grid as a DER, you can help increase the role of renewables on the grid and improve grid resilience.

What is a microgrid strategy?

The Strategy development process began with microgrid experts deliberating on areas the Strategy should focus on for impactful results in key metrics, such as reliability, resilience, decarbonization, and affordability, in the next five to ten years.

What is the mix of energy sources in a microgrid?

The mix of energy sources depends on the specific energy needs and requirements of the microgrid. **Energy Storage:** Energy storage systems, such as batteries, are an important component of microgrids, allowing energy to be stored for times when it is not being generated.
