

Can TES be applied in a zero-carbon microgrid?

The TES can also be applied in a zero-carbon microgrid when suitable geographical conditions exist. The energy transition between the power and thermal should be conducted in an optimized way with the consideration of the randomness and fluctuation of renewable power generation.

Will zero-carbon microgrid be a future power system?

Also, few papers have discussed the trends, challenges, and future research prospects for developing the zero-carbon microgrid, an important form of the future power system. This research aims to fill the gaps and point out these important issues.

What are the development trends of a zero-carbon microgrid?

Then, three development trends of the zero-carbon microgrid are discussed, including an extremely high ratio of clean energy, large-scale energy storage, and an extremely high ratio of power electronic devices. Next, the challenges in achieving the zero-carbon microgrids in terms of feasibility, flexibility, and stability are discussed in detail.

How to improve the stability of zero-carbon microgrids?

Stability analysis and control techniques should be studied especially for the zero-carbon microgrid with grid-forming and grid-following converters. Large-scale low-price energy storage and the corresponding control techniques for feasibility, flexibility, and stability enhancement of the zero-carbon microgrids should be developed.

What is a microgrid in China?

In 2004, China began to carry out research on the concept of microgrids as proposed by the United States. This research has been based on the connection of distributed generation to large electrical grids via AC (alternating current) microgrids and the impacts of microgrids on large grids.

Do microgrid technologies face new challenges in China?

After years of development in China, microgrid technologies have achieved remarkable results, but there are still a lot of smart device issues that need to be addressed throughout the entire microgrid system. At the same time, microgrid technologies faces new challenges under the background of the new era of electricity sector development.
