

When will a mobile microgrid be tested?

The AGES prototype is expected to be tested in the fall of 2023 and to be part of the 2024 Arctic Edge Exercise in Alaska." To develop a standardized mobile microgrid unit with non-traditional battery storage that can sustain temperatures down to -60F, DoD awarded a prototype contract with HDT Global of Solon, Ohio.

What is a tactical microgrid?

The tactical microgrid is a warfighter-operated and maintained power system consisting of a mobile, flexible group of interconnected power generation sources, distribution, energy storage and load devices that act as a single, controllable system to provide electricity on the battlefield.

What is a DC vehicle-based microgrid?

The DC vehicle-based microgrid consists of modified medium tactical vehicles equipped with exportable power components. These vehicles can operate independently or be networked together to create a mobile electric power source, eliminating the need for traditional generators.

What is a hybrid AC microgrid?

The hybrid AC microgrid combines energy storage with traditional tactical generators, enabling demand reduction, reducing generator run time and providing uninterrupted backup power during tactical operations.

Can a rocket system host a vehicle-centric microgrid?

The rocket system can host a vehicle-centric microgrid. Integrating power generation directly onto tactical vehicle platforms, VCMs are designed to provide on-the-move power for next-generation warfighting capabilities, such as directed energy and missile defense systems.

Why do we need a micro-grid?

The goal is to have a reliable and efficient micro-grid that is scalable and transportable, allowing various uses in supporting domestic and international missions," said Commander Joel McMillan, U.S. Navy, of NORAD and USNORTHCOM.

As a follow-up to the advanced, stationary microgrid, Faith has launched a new mobile microgrid that will help serve mission-critical government buildings, military operations, ...

An intuitive mobile app also helps consumers connect, allowing for more active participation and better control over energy use. Extensive field testing of the prototype shows that by moving

To develop a standardized mobile microgrid unit with non-traditional battery storage that can sustain temperatures down to -60F, DoD awarded a prototype contract with HDT Global of Solon, Ohio.

The Pentagon's Defense Innovation Unit announced that it is partnering with MITRE and 10 Defense Department components to develop a microgrid capable of working at temperatures as low as -60 ...

by Brianna Crandall -- August 1, 2018 -- Faith Technologies, an energy expert and national provider of electrical planning, engineering, design and installation, in partnership with its lean ...

The U.S. Defense Innovation Unit (DIU) is developing a standardized mobile microgrid unit with battery storage for ensuring reliable power supply for its Arctic operations. This effort, called the Arctic Grid Energy ...

by Brianna Crandall -- August 1, 2018 -- Faith Technologies, an energy expert and national provider of electrical planning, engineering, design and installation, in partnership with its lean manufacturing group Excellerate Manufacturing, is ...

Microgrids have low inertia compared to the larger macrogrid. The powerMAX system is ideal because the SEL Real-Time Automation Controller (RTAC) makes automated control decisions at near-relay speeds, allowing the system to ...
