

NAWA Technologies (NAWA), a pioneer of revolutionary 3D nanotechnology to unleash fast, sustainable, and efficient energy storage, has achieved another world first, tripling the manufacturing capacity of its revolutionary Vertically Aligned ...

NAWATEchnologies is a deep tech startup tackling climate change head on with a new generation of batteries. The company is developing and commercializing batteries with higher capacities, faster charging speeds, and longer lifespans. Its electrode material made from aligned carbon nanotube mats is helping revolutionize batteries.

France-based Nawa Technologies (NAWA) has introduced a ground-breaking ultra-fast carbon battery with unique electrode materials, combining the best nano and clean technologies to store more electricity than ...

NAWA Technologies, pioneers of next-generation energy storage systems, announces it has hit a significant milestone with the start of manufacturing of its revolutionary Vertically Aligned Carbon Nanotube (VACNT) material.

NAWA Technologies was founded by Dr Pascal Boulanger and Ludovic Eveillard using a technology from the CEA with a focus on VACNT (Vertically Aligned Carbon Nanotubes) production for electrodes June 2014

NAWA has said it is already producing electrodes with carbon nanotubes for batteries that could provide up to three times the energy density and ten times the power. This translates to much faster charging times and as up to five times longer battery lifespans.

NAWA Technologies has developed a new generation of batteries that can be recharged in seconds for up to a million cycles and is also safer and more environmentally friendly to man...

Founded by Pascal Boulanger, who chairs the board of directors, the startup develops solutions around the "Vertically Aligned Carbon Nanotubes (VACNT)" technology. Its situation is rather unusual: placed in receivership, two offers have been made by its current shareholders.
