

Facilis is now shipping TerraBlock 6.0, the latest iteration of its production-proven shared storage solution, which features several improvements designed to augment usability, collaboration and performance - including Lightweight Directory Access Protocol (LDAP)/Active Directory synchronization, volume size reduction on the fly, a sleek new ...

It is not trustworthy to store your source media on the Terrablock, or even use it as a go between for transfers, unless you have 2 more copies of the media living somewhere else. We use ours ...

It is not trustworthy to store your source media on the Terrablock, or even use it as a go between for transfers, unless you have 2 more copies of the media living somewhere else. We use ours almost entirely for our offline editing and have it hooked up to ~20 Avids.

Making a significant commitment to sustainability, PRNC opted to convert the existing tailings storage infrastructure into a dry stack instead of constructing a new facility. The decision minimized land disturbance, aligning with broader global ...

TerraBlock is Facilis" multiplatform, high-capacity, shared storage solution supporting 4Gb/s and 8Gb/s Fiber channel, and GigE and 10GigE through the Facilis Shared File System. Key version 5.5 features include: o Linux Shared File System Support - Mount Multi-user Write volumes on Linux workstations connected via Fiber channel or Ethernet

When Nomad needed to expand its existing Facilis storage to support the growing needs of its busy offline, online/finishing and VFX rooms in New York, Nomad's Technical Producer Matthew Poletto once again turned to Facilis Reseller Cutting Edge to install an additional 64TB TerraBlock 24EX shared storage system.

TERRABLOCK has been engineered and tested to prevent hostile vehicles from gaining unauthorised access. The product has been certified as stopping a 15,000lb truck when travelling at speeds of 50mph. The range uses an energy transfer system to minimise any impact which occurs if a vehicle were to collide with the barrier.

Belfast-based Ka-boom - one of Northern Ireland's fastest growing Production and Post Production facilities for TV and Film - has announced that the successful integration of a 48TB Facilis TerraBlock 24D shared storage system has revolutionized working practices at ...

Facilis HUB Shared Storage for video editing is a system dedicated to improving post-production and content creation workflows. Included with every server is the Facilis Shared File System which easily accommodates multi-platform environments and enables collaboration among different applications and image formats.
