

Does the deregulation of the price of OTC medicines lead to lower prices?

However, according to Stargardt et al., the deregulation of the price of OTC medicines did not lead to lower prices 2 years after the liberalisation in Germany, suggesting that competition was not in prices but rather in services. Furthermore, the number of European countries allowing non-pharmacy retail to sell OTC medicines is increasing.

Should the distribution of OTC medicines be liberalised?

The liberalisation of the distribution of OTC medicines is usually driven by policymakers stating that such a policy will bring a reduction in prices, as well as increase accessibility and competition. However, the existent literature provides mixed results.

Should pharmacy monopoly dispense OTC medicines?

We acknowledge that such convergence should be achieved within the two main groups, countries, where pharmacies have the monopoly of dispensing OTC medicines, and countries, where non-pharmacy retail is widely spread and is allowed to dispense OTC medicines.

Does the restriction of pharmacies affect the accessibility of OTC medicines?

The restriction or lack of restriction of the establishment of pharmacies does have an impact on the accessibility of OTC medicines in countries, where non-pharmacy retail is not allowed, an example of their impact of them can be found in Barbarisi et al. .

What is the regulatory framework for the distribution of OTC medicines?

The regulatory framework of the distribution channels of OTC medicines in European countries was reviewed by Vogler and Oleszkiewicz et al., both papers classifying the European countries into three groups. The first group includes countries, where the distribution is monopolised by community pharmacies.

Are OTC medicines available online?

In addition, these items were also employed in the cluster analysis. Pharmacy ownership is mainly private, and in the majority of countries, OTC medicines are not subject to any pricing system. Almost every country studied allows online selling of OTC medicines, and 16 countries allow non-pharmacy retail to sell OTC medicines as well.
