

Sungrow make a complete range of solar inverters and energy storage products for residential, commercial, industrial and utility grade solar projects. There is an inverter and energy storage solution for every application including grid connected, backup power and off grid. Designed specifically to suit Australian and New Zealand conditions and ...

Grid-tied Inverters. As the name implies, grid-tied inverters are connected straight to the grid. This means that they can't be used in conjunction with solar batteries but work well as more cost-effective options if a battery isn't what you're after. In New Zealand, we strongly recommend GoodWe's range of inverters.

Ultimately, the best inverter for your solar installation depends on your specific needs and situation. For the majority of grid-tie installations, a string inverter or hybrid inverter will be the best, most cost-effective solution but there is definitely a place for microinverters and inverter chargers in certain systems.

The best solar inverters in 2024. In the table below, we've compared some of the most common inverters available in New Zealand right now. While we'll almost always recommend Fronius, there are specific circumstances where we'll specify ...

We generally use one of two types of inverters for solar systems that are "grid tie" - connected to the national power grid. They both perform the same basic function (converting DC power to AC power), but where they differ is how they are connected up to ...

YHI Energy supplies Solar, Battery, EV Charging, Energy Storage, Power Quality & Continuity products to businesses in New Zealand and the Pacific Islands. World-renowned brands supported by local specialists and a nationwide distribution network.

A solar system is relatively affordable, easy to install, and has low maintenance requirements. Most people choose rooftop panels, an inverter, and sometimes a battery bank system to store excess generation. There are a lots of companies who can offer installation and support for custom solar systems for your home.

A solar energy system that is "grid connected" is connected to New Zealand's national electricity network, commonly known as the "grid". This means you can draw down power from the grid when you need it, and sell back any surplus energy you generate as well.
