

As we transition our energy mix towards lower-carbon sources (such as renewables or nuclear energy), the amount of carbon we emit per unit of energy should fall. This chart shows carbon intensity - measured in kilograms of CO₂ emitted per kilogram of oil equivalent consumed.

Designed dynamic real-time tariffs that provide the required revenue as the island transitions to renewable energy. Put simply, when energy is abundant because the sun is shining, electricity tariffs are low, while they will remain high when the diesel generators are operating.
