

In this second installment of our series on North Korea's energy sector, we will examine the evolution of solar energy in the state's energy plans and policies. Hydropower still makes up the bulk of the country's renewable ...

In this new series, 38 North will look at the current state of North Korea's energy sector, including the country's major hydro and fossil fuel power stations, the state's push for local-scale hydro, the growing use of renewable ...

4 ???&#0183; North Korea suffers from chronic energy shortages. Rolling blackouts are common, even in the nation's capital, while some of the poorest citizens receive state-provided electricity only once a year.

3 ???&#0183; Figure 4 shows Jeollanam-do is projected to account for 30% of Korea's solar and 25% of its wind power generation. ... An Analysis of Long-Term Scenarios for the Transition to Renewable Energy in the Korean Electricity Sector. Energy Policy, 52 (2013), pp. 288-296, 10.1016/j.enpol.2012.09.021.

In this new series, 38 North will look at the current state of North Korea's energy sector, including the country's major hydro and fossil fuel power stations, the state's push for local-scale hydro, the growing use of renewable energy and research and development into new energy sources.

This study is significant and unique in that it quantitatively assessed the renewable energy potential of North Korea, a generally inaccessible region, using highly reliable satellite data and an NWP model. It serves as a first step towards a comprehensive assessment and mapping of North Korea's potential renewable solar and wind energy resources.

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included.

North Korea is increasingly turning to solar power to help meet its energy needs, as the isolated regime seeks to reduce its dependence on imported fossil fuels amid chronic power...

3 ???&#0183; Figure 4 shows Jeollanam-do is projected to account for 30% of Korea's solar and 25% of its wind power generation. ... An Analysis of Long-Term Scenarios for the Transition to ...

North Korea is focusing on initiating renewable energy sources to address its energy crisis. Research has found that renewable energy consumption positively correlates with energy poverty reduction, which is where

people lack access to energy sources.

In this second installment of our series on North Korea's energy sector, we will examine the evolution of solar energy in the state's energy plans and policies. Hydropower still makes up the bulk of the country's renewable energy generation, but solar has become increasingly important over the past decade.

This study argues that renewable energy cooperation can help North Korea address its energy shortage, which has remained unresolved since the 1990s. Amid the deteriorating production and supply conditions, these programs can
