

Specifically for North Macedonia, country factsheet has been elaborated, including the information on solar resource and PV power potential country statistics, seasonal electricity generation variations, LCOE estimates and cross-correlation with the relevant socio-economic indicators.

As North Macedonia transitions to a more sustainable energy future, the role of solar energy has become increasingly significant. With its abundant sunlight and favorable climate, the country is well-positioned to harness solar energy through photovoltaics (PV).

The first photovoltaic power plant in the country that simultaneously produces electricity from the sun and the reflection of light was installed in Negotino by EVN Macedonia at the end of 2020.

As North Macedonia transitions to a more sustainable energy future, the role of solar energy has become increasingly significant. With its abundant sunlight and favorable climate, the country ...

The most efficient and environmentally friendly way to obtain heat and electricity without polluting the environment and reducing CO₂ is through the use of solar thermal, photo/thermal or photovoltaic systems.
