

What is the solar power potential of North Macedonia?

Solar power potential The solar potential of North Macedonia is clearly the most prominent clean energy resource in the country.

Are wind power projects a good opportunity for North Macedonia?

Nevertheless,for the time being,there is no visible resistance and wind potential remains. Just as with any future exploitation of renewable energy,wind power projects can be a good opportunityfor citizen participation and creation of energy communities in North Macedonia.

What is the energy supply in North Macedonia?

ENERGY PROFILE North Macedonia ENERGY PROFILE Total Energy Supply (TES) 2016 2021  
Non-renewable (TJ) 93 548 92 443 Renewable (TJ) 19 952 22 166 Total (TJ) 113 500 114 609 Renewable  
share (%) 18 19 Growth in TES 2016-21 2020-21 Non-renewable (%) -1.2 -3.0 Renewable (%) +11.1 -0.5  
Total (%) +1.0 -2.5 Primary energy trade 2016 2021

Is North Macedonia reliant on fossil fuels?

According to the national and international statistics,such as those run by the World Data and the International Energy Agency,North Macedonia remains reliant on fossil fuels<sup>28</sup>. Majority of its total energy mix,both on supply and demand side,still falls under the category of fossil fuels (Figure 2),mostly due to the usage of coal and oil.

Should North Macedonia accelerate the transition to renewables?

Like others in the region,North Macedonia must balance its need to rapidly accelerate the transition to renewablesto secure its energy future with the need to ensure that future is one where both the country's nature and people thrive.

What is the development potential of North Macedonia?

Indeed,the development potential of North Macedonia is great,as the Minister stated. In the 2013 report<sup>33</sup>,the United Nations Development Programme (UNDP) stated that North Macedonia is one of the countries with a huge potential for renewable energy exploitation that remains almost completely unutilized.

North Macedonia has initiated reporting on national systems for policies and measures and projections, but has yet to submit a report. North Macedonia is currently working on a draft Law on Climate Action that will contain provisions, among others, for ...

Most of the country"s electricity is produced by state company ESM: 85% from thermal power plants powered by coal, 14% from hydro-power plants, and 1% from wind farms. The largest thermal power plant is the "Mining and Energy Factory" (REK) in Bitola, which produces 70-80% of the energy.

Increasing the share of the energy from renewable energy sources (RES) in the total energy consumption is one of the major strategic objectives of the Government of the Republic of North Macedonia.

The results of the study are unambiguous: North Macedonia has an enormous untapped potential for renewable energy development. Even when completely excluding all important bird and plant areas, the potential comes to ...

It will target the complete phase-out of coal-fired power, the deployment of 1.7 gigawatts of renewable energy by 2030, grid and storage investments for energy security and just transition measures to support communities affected by this transition.

"The huge sustainable energy potential of North Macedonia, especially through wind and solar energy, is an enormous opportunity for the country, which is important in the advancement of the Green Agenda", emphasized Holger Schröder from the European Commission's Directorate for Neighbourhood Policy (DG NEAR).

North Macedonia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.
