Advanced Grid Automation Technology Lab Kalkitech with the support of Intel Corporation has opened an Advanced Grid Automation Technology Lab at Campbell, California. The laboratory is a physical and virtual space where companies in the grid automation community can integrate, evaluate, and promote the use of advanced computing technologies in ...

Siemens has introduced the Sicam A8000 modular equipment series, its new telecontrol and power grid automation system. The combination of power supply, processor, and expansion modules can be used in substations for distribution network automation, for connecting renewable energy sources, in power supply applications or railway power supply systems.

The integration of sensors and monitoring devices across the grid infrastructure is central to smart grid systems. These sensors continuously collect data on various parameters such as temperature, humidity, wind speed and power flow. This real-time information enables the smart grid to anticipate and respond swiftly to weather-related challenges.
