

We create phase change materials that reduce energy use for our customers. At the heart of all innovations is our patented BioPCM® platform technology, a unique family of phase change material (PCM).

Phase Change Energy Solutions is a cleantech company that develops and manufactures innovative thermal energy storage systems. Their patented technology uses phase change materials (PCMs) to store thermal energy in a highly efficient and cost-effective manner.

Phase change materials (PCMs) are substances that absorb and release large amounts of thermal energy while melting and freezing. Our BioPCM® products include a patented family of PCMs developed by Phase Change Solutions (PCS).

Phase Change Energy Solutions manufactures and provides bio-based phase change materials that utilize the power of phase change melting and refreezing to absorb and release heat for building industry.
