

Is green energy destroying Indigenous communities in the Philippines?

This photo taken on February 25, 2017 shows an aerial shot of the mining site in Loreto town in Dinagat island. MANILA, Philippines -- The Philippines' ongoing shift to green energy sources is leaving a trail of displaced indigenous communities and devastated land, and lost lives, watchdog Global Witness reported.

Are Arkon data centers sustainable?

Arkon's data centers are fully sustainable,purchasing power locally from renewable baseload energy generators. Arkon's data centers are local consumers in the physically constrained grids where the renewable electricity is generated,helping more of those projects become viable sooner,therefore accelerating the global renewable energy transition.

How will air conditioning affect future energy consumption in the Philippines?

While the proportion of Filipino households that have "aircon" units is currently low,as the economy grows and income levels rise,more consumers will seek air conditioning. Gains in efficiencyin this end-use will therefore have a significant impact on future energy consumption.

Does supply and demand affect aircon standards in the Philippines?

The economic law of supply and demand has a bearing on aircon standards. While not yet an issuein the Philippines,manufacturers are likely to resist government regulation if it causes a noticeable or perceived threat to sales.

Who makes air conditioners in the Philippines?

In the Philippines,the Association of Home Appliance Manu-facturers(AHAM) represents the manufacturers and installers of air conditioners. AHAM projects a 20 percent growth rate for air conditioners in the country,though this rate is certainly dependent on continued economic growth.

What makes Arkon a sustainable business?

Arkon's data centers are powered by very low-cost,reliable,renewable electricitythat cannot be exported to other consumers. This underpins the sustainable profits of our business through cycles,regardless of whether it is used for hosting 3rd party computers,or delivering high performance cloud computing.

A common size for household air conditioners in the Philippines is the 1 horsepower (HP) unit. This unit is efficient and suitable for effectively cooling smaller areas. Integrating solar panels with 1 HP air conditioner units can enhance energy efficiency and reduce operational costs.

Wondering if inverter air conditioners are worth the investment? With temperatures in the Philippines reaching 40 degrees Celsius, having an energy-efficient AC is essential for comfort without high electricity consumption.& nbsp; Finding the right unit can be daunting, with questions about type, budget, and whether

they really cut costs. Luckily, we ...

We offer new solutions in solar air conditioning, power storage, and energy efficiency for your commercial and residential space. Skip to content. USA: +1 808 699 6987 ... Our most recent installation in the Philippines is with LG air ...
