

Are MC4 connectors compatible with solar panels & inverters?

**Wide Compatibility:** MC4 connectors are compatible with most solar panels and inverters available in the market. They are designed to handle a range of wire sizes, voltages, and currents, making them suitable for various solar PV installations.

Which solar connector is UL & T&#220;V certified?

The SOLARLOK PV4 connector is UL and T&#220;V certified, complying with NEC regulations. The MC3 solar connector is usually considered an outdated solar connector, but it is still used in some PV applications. This connector features similar specifications to the MC4, but without any safety mechanism.

Does a microinverter support GFP?

The microinverter has a Class II double-insulated rating, which includes ground fault protection (GFP). To support GFP, use only PV modules equipped with DC cables labeled PV Wire or PV Cable. **IMPORTANT:** Enphase IQ Series Microinverters require the Q Cable and are not compatible with previous Enphase cabling.

Should microinverters and DC connections be installed under the PV module?

Do not circumvent or manipulate the latching mechanism. Microinverters and all DC connections must be installed inside the array boundary. Enphase further requires that the microinverters and DC connections be installed under the PV module to avoid direct exposure to rain, UV, and other harmful weather events.

How much space should a microinverter be placed under a PV module?

Allow a minimum of 1.9 cm (0.75 inches) between the roof and the microinverter. Also allow 1.3 cm (0.50 inches) between the back of the PV module and the top of the microinverter. **WARNING:** Install the microinverter under the PV module to avoid direct exposure to rain, UV, and other harmful weather events. Do not mount the microinverter upside down.

How do I install a microinverter?

Make sure they are fully seated. ) Mount the microinverter bracket side up (as shown) and under the PV module, away from rain and sun. Allow a minimum of 1.9 cm (0.75 inches) between the roof and the microinverter. Also allow 1.3 cm (0.50 inches) between the back of the PV module and the top of the microinverter.
