

Can thermal power plants deliver hybrid energy to Pakistani cement plants?

Thermal power plants are a significant contributor to electricity generation in countries such as Pakistan. They are, however, inherently inefficient, and environmentally unfriendly. In this paper, the authors investigated the possibility of delivering hybrid energy to Pakistani cement plants.

Is there a hybrid PV/wind system for Lafarge Cement Factory?

In this study, a hybrid PV/wind system is proposed for Lafarge cement factory in Al-Tafilah, Jordan. The hybrid system is sized based on maximizing the fraction of demand met by the hybrid system (F_{RES}) with cost of electricity (COE) less than the grid tariff and with 100% renewable energy ratio to meet the renewable energy regulations in Jordan.

What is a photovoltaic module?

A photovoltaic (PV) module is a packaged, and connected photovoltaic solar cells assembled in an array of various sizes. Photovoltaic modules constitute the photovoltaic array of a photovoltaic system that generates and supplies solar electricity in commercial and residential applications.

Can off-grid hybrid energy models be implemented for cement plants?

The possibility of implementing the four off-grid hybrid energy models (HEMs) was investigated for the intended cement plants, using HOMER Pro software. A multi-criteria decision analysis (MCDA) was carried out, based on objectives including the net present cost (NPC), the levelized cost of electricity (LCOE), and greenhouse gas (GHG) emissions.

How much does a photovoltaic system cost?

In the produced variations, generic flat-plate photovoltaic modules were utilized. The generic PV panels had a 25-year lifespan and 14% efficiency. Each PV plate had a 1 kW rating. It was anticipated that a photovoltaic system would cost USD 350/kW to purchase, USD 350/kW to replace, and USD 10/kW to operate.

Which cement plant is the best?

HEM-2 was the best, in terms of initial costs. The optimal COE and NPC model for each of the chosen cement plants was: The most practical and cost-effective option for the Askari Cement Plant in Wah was the HEM-4, with NPC of USD 540 M, COE of USD 0.249/kWh, operating costs of USD 32.4 M/year, and reduction of the CO₂ emissions of 29.80%.

Request PDF | On Oct 2, 2018, Loiy Al-Ghussain and others published Optimization of hybrid PV-wind system: Case study Al-Tafilah cement factory, Jordan | Find, read and cite all the ...

analyze the feasibility of the application of intelligent photovoltaic power generation technology in the cement

plant. The results show that under the optimistic scenario, the average annual ...

The pozzolanic reactivity of a silica waste from a geothermal power generating plant in Mexico has been assessed. Pastes of portland cement with 25% substitution of the silica waste were hydrated ...

This article deals with the use of photovoltaic panels at the end of their life cycle in cement composites. Attention is focused on the properties of cement composite after 100% ...

In the produced variations, generic flat-plate photovoltaic modules were utilized. The generic PV panels had a 25-year lifespan and 14% efficiency. Each PV plate had a 1 kW rating. It was anticipated that a ...

Despite the clean energy benefits of solar power, photovoltaic panels and their structural support systems (e.g., cement) often contain several potentially toxic elements used ...

We use LCA to identify the environmental impact of manufacturing and deployment for PV utilities in detail with a case study of a 30 MW PV plant to identify key areas of carbon intensity from cradle to grave, ...

In particular, methods using the AI approach for the following applications are discussed: prediction and modeling of solar radiation, seizing, performances, and controls of ...

1.3 3Main components of a photovoltaic plant...8 1.3.1 Photovoltaic generator 8 1.3.2 Inverter ... of the panels.....22 .12.7 Voltages and currents in a ... 9.1.11 Molded-case circuit-breakers ...

Foam created due chemical reaction Fig. 6. Cement covering solar power plant Fig. 7. Solar power plant after cleaning Fig. 5. Cement dropping 4. There were few panel on which cement ...

DOI: 10.1016/j.renene.2019.12.078 Corpus ID: 213844863; Optimal site selection for solar photovoltaic (PV) power plants using GIS and AHP: A case study of Malatya Province, Turkey

The prices of PV panels have dropped by a factor of 10 within a decade. In general, the PV setup consists of several parts including the cells, electrical and mechanical ...

The project will use fixed-tilt bifacial solar panels that generate power on both the front and back sides of the module. The solar project will reduce the cement plant's CO₂ emissions by 25,000 tons annually. Holcim is ...

In regular (rooftop and land based) solar PV plant, one of the biggest adversary is the dust accumulation of the solar panel. In case of FPV plant, dust accumulation does not occur ...
