

Can I install solar panels myself?

You can install solar panels yourself, but doing it alone involves risks. Going solar has significant financial benefits: it reduces your monthly electricity costs and can even increase the value of your home. Incentives can lower your overall cost drastically, but solar is still a big investment.

Should you install a solar energy system on your roof?

When you install a solar energy system, you're getting more than just solar panels on your roof. Multiple pieces of equipment, such as racking, wiring, and inverters, must be installed so the solar panels can power your home. There are also a number of costs that ensure your system is installed correctly and that the solar company can operate.

Is it difficult to install solar panels?

It is not overly difficult to install solar panels. They fit onto a frame and then are fastened into place. However, installing the entire solar array can be more challenging, especially if you do not have electrical wiring experience.

Should you choose a solar photovoltaic system?

Solar photovoltaic (PV) systems have become an increasingly popular choice for those looking to reduce their carbon footprint and save money on energy bills. Before choosing a new system, homeowners should know how a roof can impact options, the best ways to connect the panels, and more.

Can a roof support solar panels?

Make sure your roof can support solar panels. A solar installer, roofing expert, or structural engineer can help you determine your roof's solar suitability.

How do you install solar panels on a rooftop?

Solar involves electrical work on rooftops, only attempt DIY if you have experience. Hire a reputable, licensed solar contractor if using professionals. Verify they have an electrician on staff. Have the installer provide a detailed plan with panel placement, wiring runs, and electrical connections.
