

Photovoltaic panel investment payback period

What is a solar panel payback period?

“Solar panel payback period” is the amount of time it'll take you to completely pay off your solar power system through savings on your electric bill. It is calculated by taking the total cost to install the system, then subtracting solar incentives and/or rebates, and monthly electric bill savings until the total cost has been paid off.

How do I calculate my solar payback period?

Your electricity use and cost, the cost of solar, and your access to solar incentives all impact your solar payback period. To calculate your solar payback period, you simply divide the cost of installing your system by the amount of money you'll save each year.

What factors affect your solar payback period?

Electricity prices are another key factor influencing your payback period. Your annual savings from solar panels fluctuate with decreases and increases in your energy bills. The higher your electricity rates, the greater your savings and the shorter your payback period. Indirectly, your solar payback period also depends on your location.

How do I know if a solar contractor has a payback period?

There's a decent chance your contractor will have a spreadsheet-style document with all the details you need to understand your payback period. That document will typically pull information from multiple resources and tools generally available to solar contractors. For instance, when we worked the angles on our roof, we used a tool called PVWatts.

How do you calculate a payback period?

The simplest way to model the payback period is to divide the project's costs by the expected annual production number offered by the calculator. That's a good start, but it probably won't tell us the whole story. Your actual payback period will need to consider tax credits, net metering, and state incentives.

What is considered a 'decent' payback period?

When considering that lifetime, any payback period less than about half that time, or 12.5 years, can be considered "decent." More important than payback time is a concept called "Internal Rate of Return," or IRR for short.

Your actual payback period will need to consider tax credits, net metering, and state incentives. Let's start with the federal Residential Energy Efficient Property Credit. Currently, the tax credit is 26% of the solar power ...
