

Can electrostatic separation be used for recycling photovoltaic panels?

Z.S. Zhang, B. Sun, J. Yang, Y.S. Wei, S.J. He Electrostatic separation for recycling silver, silicon and polyethylene terephthalate from waste photovoltaic cells The design of an optimal system for recycling photovoltaic panels is a pressing issue.

How does electrostatic separation affect waste silicon photovoltaics?

Electrostatic separation has an influence in most of the materials present in waste silicon photovoltaics. This process may assist in the recycling of waste PV.

What is the difference between mechanical and thermal treatment of photovoltaic panels?

The mechanical methods include crushing, attrition, and vibration for glass separation and is the less polluting method compared to the other two [10,11,12]. Thermal treatment is mainly used to remove the polymeric fraction of the photovoltaic panel, i.e., EVA resin and backsheet materials [13,14].

What is the recycling rate of photovoltaic panels?

In particular: Minimum collecting rate as average weight of photovoltaic panels is 45% of total devices by 2016 and 65% later. Minimum targets as recovery and recycling are respectively 75% of and 65% as average weight by 2015. Up to now several authors carried out research related to PV panels recycling.

Why did electrostatic separation fail in photovoltaic panels?

Electrostatic separation was not able to concentrate the polymers present in photovoltaic panels. The presence of PVC as one of the polymers present in photovoltaic panels may have contributed to the failure of the electrostatic separation method [15,29].

What are the challenges in photovoltaic recycling?

Among the key challenges in photovoltaic recycling, both in economic and in technological terms, are the delamination, separation and purification of silicon from glass and semiconductor thin film.
