What are the requirements for a PV installation?

Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work. There are two routes to comply with the requirements of Part P: Notify the relevant Building Control department before starting the work.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

What are the requirements for deploying a PV system?

associated with deploying PV. Licensing standards are important aspects of PV installations. The level of training required, the allowable ratio of licensed electrician to apprentice, and the defin

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:

What are NRCan's photovoltaic ready guidelines?

NRCan's Photovoltaic Ready Guidelines is an excellent resource for builders integrating solar PV into their plans. It provides technical information on optimal roof angles and orientations as well as typical distances for roof set back, utility room space requirements, as well as solar conduit requirements.

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement, builders should minimally specify an area of 50 square feet in order to operate the smallest grid-tied solar PV inverters on the market.

**Solar Module Cell:** The solar cell is a two-terminal device. One is positive (anode) and the other is negative (cathode). A solar cell arrangement is known as solar module or solar panel where solar panel arrangement is known as ...

**Grid Connection and Utility Requirements: Going Grid-Tied.** Most solar panel arrays are connected to the electrical grid, allowing for the exchange of electricity between your system and the utility company. Here are
