# **SOLAR** PRO. Photovoltaic solar panel drawing

#### How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

What are photovoltaic panels & how do they work?

They are designed for builders constructing single family homes with pitched roofs, which offer adequate access to the attic after construction. It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner.

#### Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m2/kWp,avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.

#### Why should you use AutoCAD for solar projects?

As a software, it is extremely feature-loaded and is an in-demand skill by solar companies around the globe. AutoCAD helps solar designers create comprehensive project designs of ground-mounted, rooftop, carport and sloped roof solar projects. It also provides wire sizing, stringing, and single line diagram generation.

#### How much space does a photovoltaic module occupy?

Photovoltaic modules installed on a sloping roof or facade occupy an area of approximately 8 m2/kWp. Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m2/kWp,avoiding shading between the rows of modules.
