

Solar potential of Belarus. As of 2021 there is little use of solar power in Belarus but much potential as part of the expansion of renewable energy in Belarus, as the country has few fossil fuel resources and imports much of its energy. [1] At the end of 2019 there was just over 150MW produced by solar power. [1]: 29

This paper discusses the resource, technical, and economic potential of using solar photovoltaic (PV) systems in Belarus and Tatarstan. The considered countries are characterized by poor actinometric conditions and relatively low tariffs for ...

As of 2021 there is little use of solar power in Belarus but much potential as part of the expansion of renewable energy in Belarus, as the country has few fossil fuel resources and imports much of its energy. At the end of 2019 there was just over 150MW produced by solar power.

Renewable energy and solar energy in particular has become a trend in Belarus, with more and more companies investing in solar installations and selling energy into the grid. Although this sector is still at the initial development stage, the direction chosen is highly perspective.

Specifically for Belarus, country factsheet has been elaborated, including the information on solar resource and PV power potential country statistics, seasonal electricity generation variations, LCOE estimates and cross-correlation with the relevant socio-economic indicators.
