

This study introduces a multi-objective power scheduling of a residential microgrid that consists of PV, wind generator (WG), EVs, and battery energy storage system (BESS). It ...

Croatia added 238.7 MW of installed solar in 2023, according to figures from the Renewable Energy Sources of Croatia (RESC). The association said the country's total installed solar capacity now stands at 462.5 MW.

The proposed planning and optimization framework analysis reveals significant advancements in residential microgrids' efficiency, reliability, and economic viability. The framework substantially reduces payback periods across load profiles by effectively integrating renewable energy sources, such as PV systems, with advanced energy storage ...

Microgrids are energy network arrangements that can enable providing a suitable renewable energy mix for serving residential demands--including for geothermal-based heat pumps. A microgrid forms a cluster of load demands and micro-scale power sources ( $<100$  kW) operating as a single controllable system capable of providing both power and heat ...

Defining Key Parameters of Economic and Environmentally Efficient Residential Microgrid Operation ...  
Unska 3, 10000 Zagreb, Croatia Abstract Aggregating consumers and distributed generation on the same location with coupled centralized control is the main advantage of a microgrid concept. If these consumers do not have the ability to balance ...

The recommended solution for smart energy management in a residential micro-grid requires the development of advanced computational tools to put in place effective management strategies and maintain the balance between supply and demand. A residential micro-grid makes it possible to exploit renewable energy sources locally, while optimizing production, consumption and ...

This paper shows that the household sector, when organised into a form of prosumer microgrids, including renewable sources for electric, heating and cooling energy supply, can be efficiently ...

As all residential microgrids, MGP provides a large amount of data from various types of equipment and devices. Each of these data has its format and sampling ... at Kimen [11], Taiwan, and at university building of FERIT Osijek [12], Croatia. Other authors have addressed data-driven challenges solutions investigations, related to high ...

Efficient Residential Microgrid Operation Ninoslav Holjevaca\*, Tomislav Capudera, Igor Kuzlea aUniversity of Zagreb Faculty of Electrical Engineering and Computing, Unska 3, 10000 Zagreb, Croatia

This chapter studies the integration of microgrids and smart homes into the electric distribution grid. The case study is an active distribution grid integrated with four smart homes and two microgrids. The microgrids are equipped with a diesel generator, wind, and solar generating systems as well as battery storage technology.

This paper proposes an Energy Management System (EMS) of an off-grid residential microgrid comprised of a solar photovoltaic array, wind turbine, and a battery-based energy storage system for a ...

BlockEnergy 3D-rendered residential utility-owned power BlockBox, a key part of their residential microgrid system Challenges of Microgrids Though microgrids present many benefits, their implementations involve several risks largely due to the maturity of the underlying technology, high up-front costs, as well as unique project-by-project ...

A campus community solar microgrid study done by (Gasparovic et al., 2016) investigated two microgrid community cases in the University of Split (Croatia) to identify optimum scenarios for...

This study introduces a multi-objective power scheduling of a residential microgrid that consists of PV, wind generator (WG), EVs, and battery energy storage system (BESS). It also presents a comparison between two energy management techniques: renewable base control (RBC) and load base control (LBC) for controlling plug-in-electric vehicles ...

This paper presents main characteristics of the microgrid and problems that occur when dimensioning its elements. Furthermore, the operational flexibility term is defined and described and the possible flexibility services microgrids can provide to the system are mentioned. The developed MILP (Mixed

This paper proposes an Energy Management System (EMS) of an off-grid residential microgrid comprised of a solar photovoltaic array, wind turbine, and a battery-based energy storage system for a residential building in a remote ...
