

IE-Energy will build the first battery system near Sibenik, with a capacity of 100 MWh and 50 MW of power. The first phase of the project, with a power of 10 MW and a capacity of 22 MWh, should be completed during the first quarter of 2023.

The production of this innovative new Rimac battery system will heat up next year and will be ready to enter the European Union's enormous single market. Blooming Croatian ingenuity will thus become the main ...

An energy storage system will soon be installed at the largest solar power plant in Croatia, which has a capacity of 3.5 MW, said Zeljko Tuksa, President of the Managing Board of Koncar - Power Plant and Electric ...

The Government of Croatia is preparing EUR 500 million for the installation of batteries for storing renewable energy. Minister of Economy and Sustainable Development Damir Habijan said Croatia is ready for changes in the energy sector. It is important to conduct the energy sector's green transition, but also tackle the security of supply, he ...

An energy storage system will soon be installed at the largest solar power plant in Croatia, which has a capacity of 3.5 MW, said Zeljko Tuksa, President of the Managing Board of Koncar - Power Plant and Electric Traction Engineering (Koncar KET).

The production of this innovative new Rimac battery system will heat up next year and will be ready to enter the European Union's enormous single market. Blooming Croatian ingenuity will thus become the main competitor to no less than the Americans and Chinese when it comes to the cost-effective production of battery systems.

The deployment of battery trains will enhance connectivity and mobility in local and regional areas, improving service quality. These trains will integrate seamlessly with new-generation ...

Croatia got the green light from Brussels to give a EUR 19.8 million grant to a domestic startup for a massive energy storage project. IE-Energy is planning to build a battery system of 50 MW, which means it would ...

The battery storage system provides energy balancing and maintains grid stability on the island of Vis. The system operates on Li-ion batteries which enable rapid response, both in the terms of energy delivery requirements and for the purpose of storing electricity generated from either Vis SPP or the power grid.

IE-Energy will build the first battery system near Sibenik, with a capacity of 100 MWh and 50 MW of power. The first phase of the project, with a power of 10 MW and a capacity of 22 MWh, should be completed during

the ...

Croatia is preparing to build Eastern Europe's largest energy storage project. IE Energy has secured EUR19.8 million (\$20.9 million) to develop a 50 MW storage system, potentially extendable to...

The Government of Croatia is preparing EUR 500 million for the installation of batteries for storing renewable energy. Minister of Economy and Sustainable Development Damir Habijan said Croatia is ready for changes in ...

Croatia's first large-scale battery energy storage system (BESS) with 66 MW capacity is expected to be commissioned in 2025. The country's revised national recovery and resilience plan (NECP) draft envisages a further 50 MW of BESS to be built by 2030 to complement its transmission grid and distribution network. The 66 MW BESS would be ...

The deployment of battery trains will enhance connectivity and mobility in local and regional areas, improving service quality. These trains will integrate seamlessly with new-generation low-floor trains, ensuring greater capacity and lower operational costs.

Croatia got the green light from Brussels to give a EUR 19.8 million grant to a domestic startup for a massive energy storage project. IE-Energy is planning to build a battery system of 50 MW, which means it would be the biggest in Southeastern Europe.
