How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

Do rooftop solar panels affect a building?

The larger the surface area required to support the PV system, the greater the potential impact on the building structure. The use of rooftop solar panels increases the superimposed dead load (SDL) of the roofing system and can have varying impact on a building depending on what material is being used for the structural system.

Can solar panels be installed on a sloped roof?

As well, solar panel installations on sloped roofs can act to trap snow that otherwise may have been considered to slide off the roof structure. Finally, roofing systems installed in new buildings are typically designed to outlast or at least match the average life of the new solar PV system which is about 25 years.

Do rooftop solar panels add weight to a building?

For a steel or wood low rise building, the relative additional weight from rooftop solar panels can add approximately 10% to the total factored design load of the roof structure. However, when considered in light of the total building costs, this additional cost may prove to be minimal.

How do I create a roof plan in OpenSolar?

An essential part of generating the roof plan is ensuring you have drawn out the roof structure in OpenSolar. Please follow these steps: Draw out the roof structure using the 'roof' tool within the advanced settings. Mark out any obstructions necessary, using the 'obstructions' tool in the advanced settings.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m²/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.
