

What is a SAFT aircraft battery?

Saft's proven nickel-cadmium (Ni-Cd) and lithium-ion(Li-ion) aircraft battery solutions are critical to safety,providing high-peak-power for engine or APU starting and emergency power backup. They outperform lead-acid batteries in both power and reliability and offer a long and predictable service life with no risk of 'sudden death' failure.

Are SAFT Batteries safe?

For over 100 years,Saft's longer-lasting batteries and systems have provided critical safety applications,back-up power and propulsion for our customers. As a leading battery company,Saft's innovative,safe,and reliable technology delivers high performance on land,at sea,in the air,and in space.

Who is Saft battery?

For more than 100 years,Saft has been specializing in advanced-technology battery solutions for industry,in space,at sea,in the air and on land in remote and harsh environments from the Arctic Circle to the Sahara Desert. Today,Saft is a wholly-owned subsidiary of TotalEnergies.

Why are SAFT Batteries important?

Our unrivalled technical expertise,support,and service are the reason why Saft batteries are onboard two-thirds of all civil and military aircraft. Saft's proven nickel-cadmium (Ni-Cd) and lithium-ion (Li-ion) aircraft battery solutions are critical to safety,providing high-peak-power for engine or APU starting and emergency power backup.

Does Saft supply lithium-ion batteries?

In July 2013, Saft was awarded a \$6.5 million contract to supply high power lithium-ion batteries for the Lockheed Martin F-35 Lightning II Saft also supplies the battery for the Exagon Furtive-eGT, a four-seat electric sports car produced by Exagon Motors.

How many battery designs does Saft produce?

At Saft,we produce over 400different battery designs to suit virtually every requirement,each optimized for energy and power,guaranteeing integration with the electrical architecture of all fixed-wing and helicopter aircraft - even drones.

Saft's aircraft battery systems. Saft's proven nickel-cadmium (Ni-Cd) and lithium-ion (Li-ion) aircraft battery solutions are critical to safety, providing high-peak-power for engine or APU starting and emergency power backup.

Saft has developed the most advanced Ni-Cd technology for our ultra low-maintenance ULM® batteries for the aviation industry. With reduced maintenance needs and extended life, ULM® batteries deliver

SPH HIGH POWER nickel battery solutions recover their voltage instantaneously, making them the ideal choice for starting applications off-shore, on-shore, on industrial production lines, and in critical buildings such as hospitals.

It became the leading manufacturer of nickel-cadmium batteries [10] both in the aviation sector and in the railway sector. [9] In 1995, Alcatel delisted the company from the stock market and acquired a 100 percent of its shares. Later, Saft purchased Nife and Alcad, its main rivals, as well as the Czech company Ferak.
