

What is Saudi Arabia's energy strategy?

The kingdom aims to increase its electricity generation capacity from 83 gigawatts (GW) in 2023 to 110 GW by 2028, supported by a \$293 billion investment in both conventional power and renewable energy projects. At the heart of this strategy is Saudi Arabia's goal to generate 50% of its electricity from renewable sources by 2030.

How much power does Saudi Arabia need?

Saudi Arabia has established a goal to source at least 50 percent of its power from renewable energy by 2030, expanding its capacity to 130 gigawatts (GW), 58.7 GW of which is expected to come from solar and 40 GW from wind. This target is the most ambitious of its kind among Gulf Cooperation Council (GCC) countries (Figure 1).

How much solar power will Saudi Arabia have by 2030?

The program targets achieving 40 GW of photovoltaic (PV) solar capacity, 16 GW of wind capacity, and 2.7 GW of concentrated solar power (CSP) capacity by 2030. Key projects include the King Abdullah Petroleum Studies and Research Center's solar endeavor and Saudi Aramco's PV carport system.

How much electricity does Saudi Arabia generate?

Electricity generation is 40% from Oil 52% from Natural Gas and 8% from steam. Generation capacity is approximately 55 GW. A looming energy shortage requires Saudi Arabia to increase its capacity. Capacity is planned to be increased to 120 GW by 2032.

Why is Saudi Arabia transitioning to independent power and water projects?

Saudi Arabia is transitioning towards independent power and water projects to address the escalating power requirements and broaden the array of energy sources via the National Renewable Energy Program. This will be accompanied by a substantial rise in non-oil government income and the private sector's contribution to GDP. 1.

How is Saudi Arabia developing its solar energy sector?

1. Saudi Arabia has initiated the National Renewable Energy Program (NREP) to develop its solar energy sector, with several projects in progress, including a 600 MW capacity project. 2. Large-scale project such as Sakaka solar Independent Power Producer (IPP) (300 MW) and Dumat Al Jandal wind project (400 MW) were part of the first bidding process.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Saudi Arabia's energy strategy focuses on maximising returns from hydrocarbons while expanding renewable energy capacity. Acknowledging peak oil demand could occur before 2030, the Kingdom is investing in clean energy solutions. With plans to produce 50% of its energy from renewables by 2030, Saudi Arabia is diversifying its energy mix. The National Renewable ...

OverviewElectricityPetroleumNatural gasBusiness personsCarbon dioxide emissionsSee alsoSaudi Arabia is the fastest growing electricity consumer in the Middle East, particularly of transportation fuels. In 2005, Saudi Arabia was the world's 15th largest consumer of primary energy, of which over 60 percent was petroleum-based. The remainder was made up of natural gas. Two ministries share responsibility for the energy sector: the Ministry of Oil an...

Saudi Arabia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

Saudi Arabia's Renewable Energy Ambitions. Saudi Arabia has established a goal to source at least 50 percent of its power from renewable energy by 2030, expanding its capacity to 130 gigawatts (GW), 58.7 GW of which is expected to ...

Saudi Arabia is enhancing its electrical power sector infrastructure to accommodate the rising demand from both the residential and commercial sectors, simultaneously advancing its strategy for energy diversification away from traditional oil and gas reliance.

o Saudi Arabia consumed an estimated 10 quadrillion British thermal units of total primary energy in 2020, making it the second-largest energy consumer in the Middle East, behind Iran and the, 11th-largest energy consumer in the world.

By 2030, Saudi Arabia wants to produce 58.7 GW of renewable energy, of which 40 GW will come from solar photovoltaics (solar PV), 16 GW from wind energy, and 2.7 GW from concentrated solar power (CSP) [34].

Saudi Arabia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Saudi Arabia's Renewable Energy Ambitions. Saudi Arabia has established a goal to source at least 50 percent of its power from renewable energy by 2030, expanding its capacity to 130 gigawatts (GW), 58.7 GW of ...
