

What type of energy is used in Serbia?

Energy in Serbia is dominated by fossil fuels, despite the public preference for renewable energy. Serbia's Total Energy Supply is almost 700 PJ, with the energy mix in 2021 comprising coal (45%), oil (24%), gas (15%), and renewables (16%).

What is Serbia's energy supply in 2021?

Serbia's Total Energy Supply is almost 700 PJ, with the energy mix in 2021 comprising coal (45%), oil (24%), gas (15%), and renewables (16%). Bioenergy and hydroelectric power were the leading contributors within the renewable energy category, accounting for 67% and 29% of the renewable supply, respectively.

How much hydropower does Serbia have?

Serbia has plans to significantly expand its installed hydropower and renewables capacity in the coming years. It currently has a total capacity of approximately 3490 megawatts (MW) of renewables, with 2342 MW in hydropower in 2019 according to the European Energy Community.

How many MW of electricity does Serbia have?

Installed capacity of hydro power is 2,835 MW and as of December 2019 wind power capacity is 500 MW. Serbia also makes use of geothermal and solar energy, currently 27% of Serbia's electricity comes from hydro while 4% comes from other renewables. Additional 600 MW of wind capacity is planned by 2030.

What percentage of Serbia's electricity comes from coal?

Serbia's national power utility Electric Power of Serbia (EPS) produces nearly 70 percent of the country's electricity from coal and nearly 27% percent from hydropower, with approximately 4% coming from private developers in wind and solar energy. Serbia heavily subsidizes coal and electricity prices, inhibiting competition.

What is Serbia's energy investment plan?

The Ministry of Mining and Energy has announced a EUR15 billion investment plan for the electricity sector in next several years, expecting to reach more than 3 GW of renewable energy production plants. The main players and investors in the Serbian Energy Sector are:

Elevatepr.rs delves into how foreign investments are driving Serbia's renewable energy expansion, how carbon credits are generated and traded, and what the future holds for Serbia's role in the green economy.

Sources: Aurora Energy Research, Czech 2023 NECP draft, Slovak 2023 NECP draft Fast buildout of renewables will be necessary to reduce exposure to ETS and prevent persistently high prices 1) based on Aurora's central projection for Estonia, Lithuania, Latvia, Poland, Hungary, Greece, Slovenia, Croatia, Serbia, Romania, Bulgaria and Greece.

The main players and investors in the Serbian Energy Sector are: Elektroprivreda Srbije (EPS) - State owned: EPS recognizes the need to increase the share of renewable sources in Serbia's electricity production, even as the country remains largely reliant on lignite coal in the near term. By 2023, Serbia's commitments to the European ...

This groundbreaking project, led by the Hyundai Engineering and UGT Renewables consortium, marks a significant shift in Serbia's energy strategy. Serbia aims to boost green energy, reduce fossil fuel reliance, and stabilize its energy grid through this ambitious initiative. 1 GW Solar Power Project in Serbia: A Path to Energy Independence

To enable the global energy transition through quantitative analysis of energy markets. Aurora's goal is to be the leading global partner to our customers, supporting their critical decisions in the rapidly changing power landscape. Building on our University of Oxford heritage, we have established ourselves as the European leader providing ...
